MAXFIELD'S TABLE OF BASE BALL PERCENTAGES.

BY

C. E. Maxfield, Sporting Editor Pioneer Press, St. Paul, Minn.

COPYRIGHT, 1889, BY THE AUTHOR.

LIBRARY OF CONGRESS COPYRIGHT MAY 20 1889 12431 WASHINGTON

USE OF THE TABLE.

This table is designed to show, without computation, the percentage of games won by a base ball club, in a schedule of not more than one hundred and forty games for each club; the number of games won and lost, of course, being known. The reason the table is cut down on the top and at the left is that a study of base ball records for several years showed that these very small or very large percentages were never actually obtained, although an instance might possibly occur. In such a mass of figures it would be almost a miracle to avoid errors entirely, but every possible precaution has been taken to obtain absolute correctness.

DIRECTIONS.

To get the percentage of any club, find, in the consecutive numerals on the left hand margin, the number of games won. Follow the horizontal line to the right, until directly below the number of games lost, as indicated in the numerals at the top. The figures occupying the angle show the percentage required, all decimal points being omitted from the table.
